Also, the next thing I did was to delete the appdata folder in my app directory and run the game as Administrator. As a last resort, as I mentioned earlier, use a different copy of the game. (That's the only one I had, it's a few years old. And yes, I've updated all the updates for the past few years since buying it.) To elaborate a little on things you might do in the future, if you're interested in developing for the system, it's quite easy to create apps for windows phone using Visual Studio 2013. They're cross-platform, which is great, and you can create them in Unity, which is cross-platform too, so you don't need to use any Windows Phone specific tools for that. You don't need to install anything on the phone, unless you want it to, although there are a couple of.NET features that you'd want to enable if you were to do that. With Windows Phone 8.1, you have access to that. And it

supports xaml and JavaScript. So you don't have to create C# or C++ code for that. (Not that that was particularly hard to do anyway.) There's a site to help get started with 8.1 apps, as well as a link to the documentation for those features. The main site for Windows Phone dev is MSDN. You'll find all kinds of information there, not just about WP8.1. Windows Phone 8.1, in general, is an awesome system, that has some problems and quirks, but it's also a lot better than it was before. (At least for most people who use it.) If you want to get started, I'd recommend watching the tutorials and just diving right in. You don't need to have a degree in software development to start learning and writing apps. I wish you the best of luck with whatever you do, as I know it's a difficult thing to overcome, but if you want to work on a platform, you shouldn't think twice. A: Don't worry, this is not exclusive to Windows Phone. As for why the tile is disappearing, I believe this is due to something called the "Windows Phone Store refresh". From the official Microsoft blog: The windows phone store will be refreshed every Wednesday and Saturday. As always, the store will be refreshed with new games, apps, and content. Unfortunately, this will result in some app tiles on your Windows 82157476af
